Technology of Extracorporeal Assist Meeting

A unique opportunity to dive into Mechanical Circulatory Support therapies

28 - 29 February 2020
University Hospital Zurich
Rämistrasse 100, Zurich
Switzerland

www.ecmo-team.ch
Dear Colleagues,

The heart failure epidemic is constantly rising. At the same time, the current increasing trend in Mechanical Circulatory Support (MCS) contributes to patient’s quality of life and improved functional capacity, and previously fatal conditions see reasonable exit strategies.

Until recently, the chances of and need for an interdisciplinary TEAM approach in heart failure management were frequently neglected and are now becoming the main goal, especially at the clinical level. The main focus of this meeting will be to discuss clinical scenarios, decision making and management of MCS, and to give an outlook on future developments in the field.

The international meeting, which includes hands-on workshops, scientific as well as state-of-the-art clinical lectures, will provide you with the latest knowledge and skills required for successful MCS network management. We are confident that the interaction between the most reknowned speakers, chairs and you as participants will make the meeting intriguingly successful.
